AEP FROM ZERO • PART 2 • SPEAK TO YOUR CUSTOMER (AJO)

EPISODE 19

AJO Fragments & Email Designer: One Brand Voice

How do you keep one brand voice across email, push and SMS in Adobe Journey Optimizer (AJO)? In this AJO tutorial, Bloom builds header and footer fragments in the Email Designer, publishes them, and locks the legal footer with Prevent inheritance from being broken. You will learn what a channel configuration holds, the difference between Marketing and Transactional email, and how to add a One click Opt-out unsubscribe link with the right Output Level alongside List unsubscribe. You will also write

Previously: tested safely, one comma left

- Last time: own seats, Test mode, Dry run
- Rohan's empty-name seat printed “Hi ,”
- Alerts: zero errors, one opt-out warning
- Brand team's fear: three channels, three tones
- Today: configuration, priority, fragments

KEY IDEA

Bloom Welcome v1 was tested safely and exposed one bug. Today the brand team fears every channel will sound like a different company.

The fear: three channels, three tones

- Email, push and SMS, written by different hands
- Warm email at nine, curt text at noon
- Customer's verdict: nobody is in charge
- Old habit: every email rebuilt from scratch
- Divya's answer: shared blocks, rules, one owner

KEY IDEA

A warm email and a curt text from the same brand on the same day tell the customer that nobody is in charge.

One message, several channels, one owner

Channel	What the message needs
Email	A subject line and a body
Push	A short title and a short body
SMS	A hard character budget
Every channel	The same voice and one owner

KEY IDEA

Content and channel are separate decisions. Write the message once, then shape it for email, push and SMS.

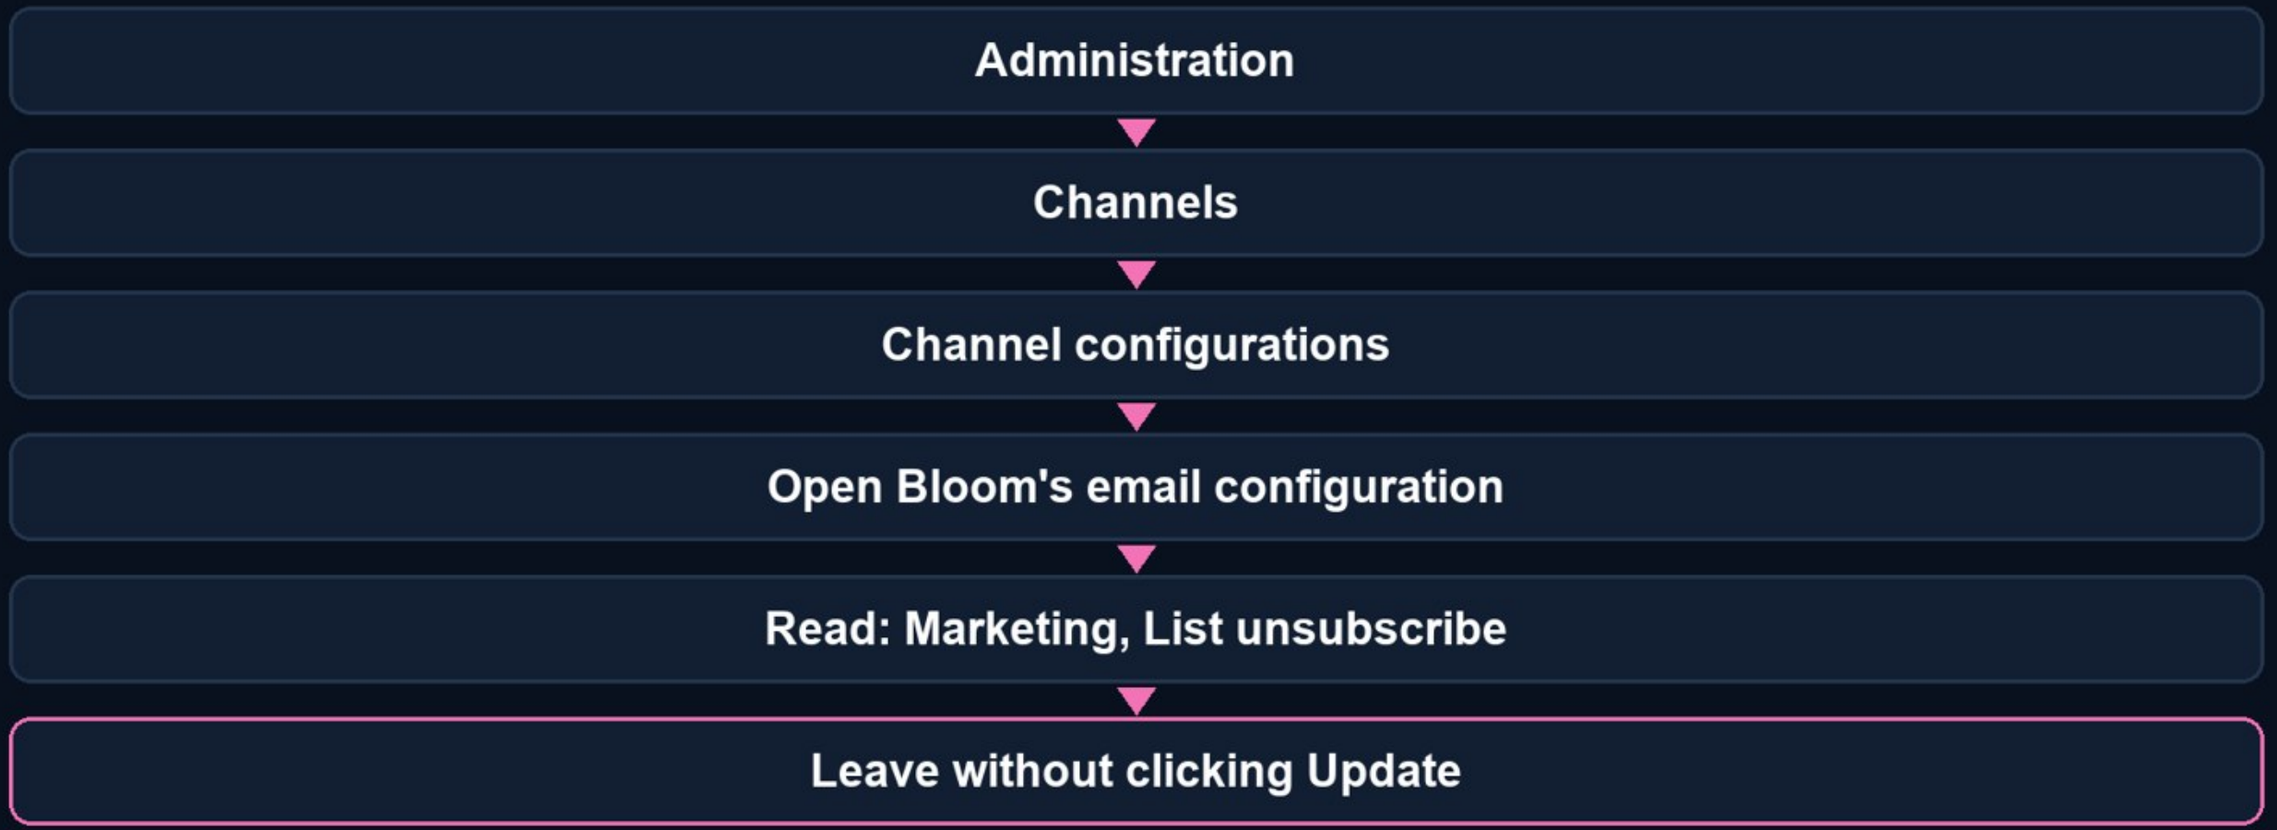

Marketing vs Transactional email in AJO

Channel configuration	Marketing	Transactional
Used for	Offers, welcomes, win-backs	Service messages
Opt-outs	Respected	Overridden
Example	A loyalty thank-you	An order receipt
Who sets it up	An administrator	An administrator

KEY IDEA

Every AJO email goes through an admin-owned channel configuration. Marketing respects opt-outs; Transactional overrides them.

Read the configuration; never press Update

KEY IDEA

Bloom's email configuration reads Marketing, with List unsubscribe on. It opens in edit mode, so read it and leave without Update.

Channel priority: a written business decision

Push first, for app users

▼

Email as the fallback

▼

SMS only when time-critical

▼

One message, one channel

▼

Consent decides who is reachable

▼

Written down before it is built

KEY IDEA

Push first, email as the fallback, SMS only when time-critical. Decide the order in writing before anyone builds it.

Content cards: worth saying, not interrupting

- Email, push and SMS all interrupt
- A content card waits inside the app
- High relevance, zero interruption cost
- Good for a points balance, a tip, a nudge
- Rule: worth saying, not worth interrupting for

KEY IDEA

Not every message should interrupt. A content card waits inside the app until the customer is already there.

What is a fragment in AJO?

	Fragment	Content template
What it is	A block emails reference	A starting point emails copy
Change it later	Every email using it updates	Built emails stay as they are
Use it for	Header, footer, legal block	A standard layout to start
Where	Content Management	Content Management

KEY IDEA

A fragment is a reusable content block that many emails reference. Build once, change once, every email follows.

Building the Bloom header

Content Management, Fragments

▼

Create fragment

▼

Name, description, Visual fragment

▼

Structure first: one column

▼

Logo and colours from the brand sheet

▼

Save: the status reads Draft

KEY IDEA

Kavya built the Bloom header as a Visual fragment straight from the brand sheet: structure first, then the logo and colours.

How to add a one-click unsubscribe link

Footer fragment with the legal block

▼

Select the word Unsubscribe

▼

LINK panel: Type, One click Opt-out

▼

Optional confirmation page

▼

Choose the Output Level

▼

Save, publish, add to every email

KEY IDEA

Select the word Unsubscribe, set the link Type to One click Opt-out, choose the Output Level, then save and publish the footer.

Output Level and the other link types

Link type	Who records the choice?
One click Opt-out	The click itself
External Opt-out or Opt-in	Bloom's own page must record it
Landing page	Only its form: a two-step opt-out
Mirror page, Deeplink, External	Nobody: these are ordinary links

KEY IDEA

Bloom chose Output Level Channel, because stop means stop. Other link types work only if something records the choice.

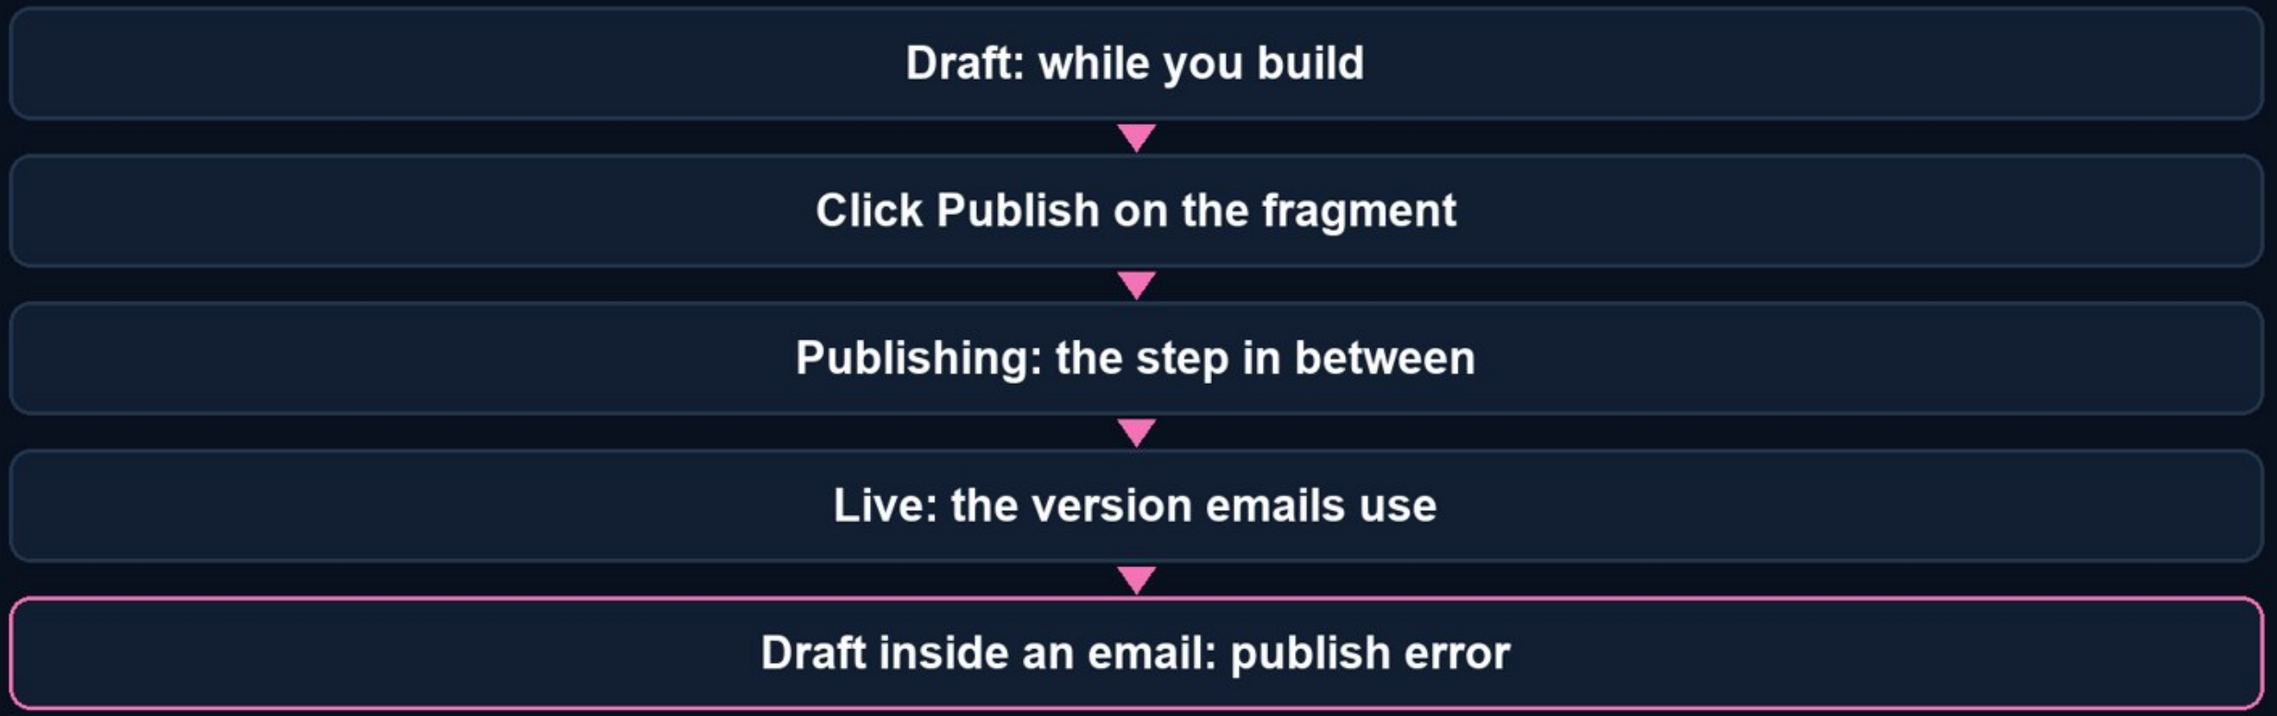

Inheritance: the lock on the legal footer

- Edits flow to every email using the fragment
- The unlock icon in an email breaks the link
- A broken copy stops receiving updates
- Footer: Prevent inheritance from being broken
- Header: local changes allowed

KEY IDEA

Every email inherits each fragment edit unless inheritance is broken. Set legal footers to Prevent inheritance from being broken.

Publish: Draft, Publishing, Live

KEY IDEA

Publishing a fragment sends nothing; it makes this version the one emails use. A Draft fragment in an email errors at publish.

Into the welcome: the warning clears

Open the Gold welcome email

▼

Left rail: the Fragments icon

▼

Header on top, footer at the bottom

▼

Explore references: one email only

▼

Repeat in the Standard welcome

▼

Alerts: zero errors, zero warnings

KEY IDEA

Dragged into both welcome emails, the footer cleared the opt-out warning. Explore references showed exactly which emails use it.

Variants, proofs and the phone-width check

- Push and SMS versions, in the same voice
- A welcome never goes by SMS: not time-critical
- Welcome v1 stays one email per path, as tested
- Proofs and seed sends: your own inbox only
- Read every proof at phone width

KEY IDEA

The kit gained push and SMS versions; the written priority decides which one a customer gets. Proofs went only to the team's own inboxes.

Interview corner

- Priority is a business decision
- Fragments: build once, change once
- Lock the legal footer
- One click Opt-out, Output Level on purpose
- Never a promotion through Transactional

KEY IDEA

Channel priority is a business decision, not a technical default, and fragments make one brand voice enforceable.

Recap, your question, and the broken greeting

- Marketing respects opt-outs; Transactional overrides
- Priority in writing; content cards for the rest
- Fragments Live, footer locked, warning cleared
- Next: fallbacks, if-else, conditional content

KEY IDEA

One configuration, a written priority, Live fragments and a locked footer. Next: fallbacks, if-else lines and conditional content.
