AEP FROM ZERO • PART 3 • PROVE WHAT WORKED (CJA)

EPISODE 27

Analysis Workspace Tutorial for Beginners (CJA)

An Analysis Workspace tutorial for beginners in Customer Journey Analytics (CJA): create a Workspace project, choose a data view and a date range, and save a new project by hand the first time. Build a freeform table with the table builder, add a breakdown and a linked visualization, and learn why a new panel that opens on This month shows a table of zeros. Bloom's analyst turns the CMO's five questions into table specs, spots the No value row and duplicate channel values before ranking

Previously: a data view people can trust

- Last time: the Bloom Marketing data view
- Trusted names and a 30-minute session
- Derived fields cleaned channels and loyalty bands
- Today: Anjali's five questions
- Your first Analysis Workspace project

KEY IDEA

Bloom Marketing gives every metric one trusted name. Today Anjali sends five questions, and Kavya answers them in her first Workspace project.

Five questions before the board update

- 1. Welcome: entries, completion, repeat order in 14 days
- 2. Cart Rescue: recovery rate and recovered revenue
- 3. Revenue by channel, order value, orders per person
- 4. Are Gold members actually worth more?
- 5. Day-7 repeat purchases for New This Month

KEY IDEA

Anjali's five questions once needed two weeks and three vendors. With one connection and one data view, one person can answer them in one project.

Question first, then the table

Anjali's question	Rows	Columns
1 Welcome to repeat order	Journey name	Entries, orders
2 Cart Rescue recovery	Rescue group vs holdout	Cart adds, orders, revenue
3 Revenue by channel	Marketing channel	Orders, revenue
4 Is Gold worth more?	Loyalty band	Orders, revenue
5 Day-7 repeat purchase	New This Month starters	Repeat orders

Who: a segment (episode 28). When: the relaunch fortnight.

KEY IDEA

Write the question first. Each question becomes a table spec: rows, columns, who and when. Freeform tables answer questions; they do not ask them.

Workspace in one picture

Part	What it is
Project	One file of analysis, up to 15 panels
Panel	Its own data view and its own date range
Visualization	A table or chart, up to 25 per panel
Component	Dimension, metric, segment, date range

Analysis Workspace guardrails as of 2026

KEY IDEA

A project holds panels. Each panel has its own data view and date range. Visualisations sit inside panels, and components are what you drag in.

Build your first Workspace project

Workspace, then Create project

▼

Blank Workspace project, Create

▼

Panel: choose the data view

▼

Panel: check the date range

▼

Project, Save: type a Name

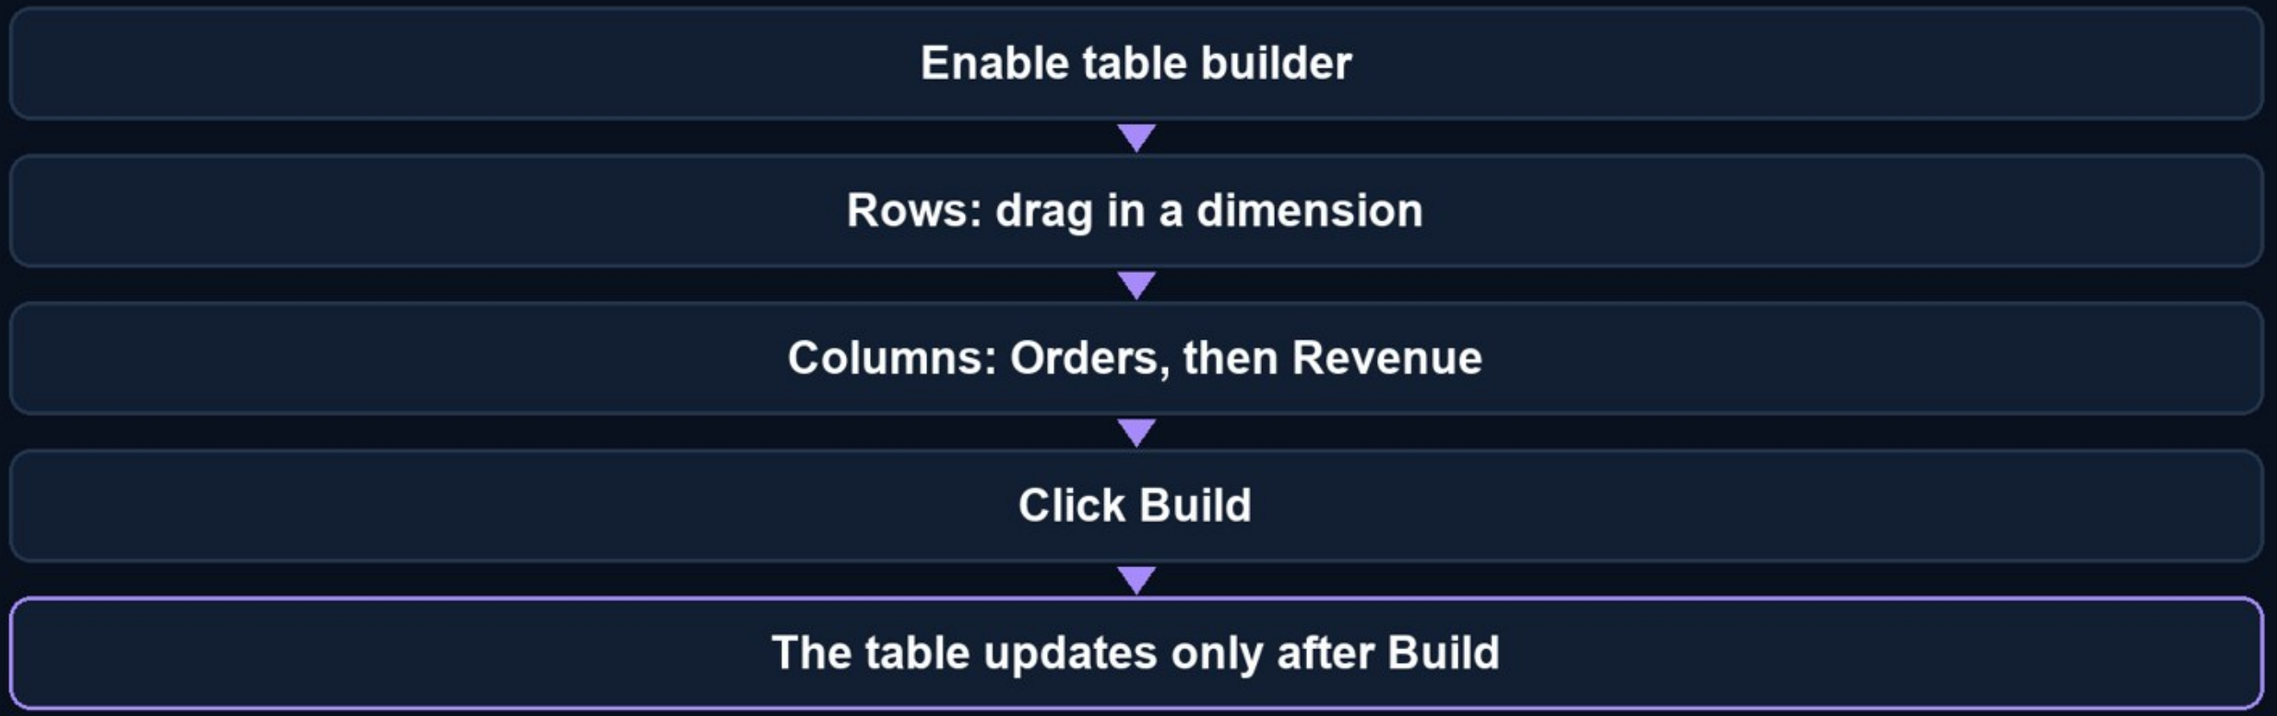

▼

Save by hand again before leaving

KEY IDEA

Workspace, Create project, Blank Workspace project, Create. Choose the data view, check the dates, then save the new project by hand.

Freeform tables and the table builder

KEY IDEA

A freeform table puts a dimension down the side and metrics across the top. With the table builder on, nothing runs until you click Build.

Why does a Workspace table show all zeros?

Every row of the table reads zero

▼

1. Panel date range: This month?

▼

2. Panel data view: the right one?

▼

3. Only then suspect the data

▼

Fix: set the dates, then Apply

KEY IDEA

A new panel opens on This month. If your data sits in an earlier month, every cell reads zero. Check the dates, then the data view, then the data.

1,240 orders, and a ranking too soon

Channel row (first table)	Orders
No value	520
email	150
Email	30
Every other channel	540
Total, relaunch fortnight	1,240

Bloom sample storefront data (fictional). Revenue: $66,260

KEY IDEA

With real numbers on screen, Kavya started ranking channels for Anjali, and skipped the biggest row without reading it.

What does No value mean in CJA?

- No value: the dimension was empty on those rows
- Bloom: 520 of 1,240 orders had no channel
- It is a tracking gap, not a channel
- Never rank it; never hide it quietly
- Size it, say it first, then find the cause

KEY IDEA

No value collects every row where the dimension was empty. It is a tracking gap, not a channel: size it, say it first, then find the cause.

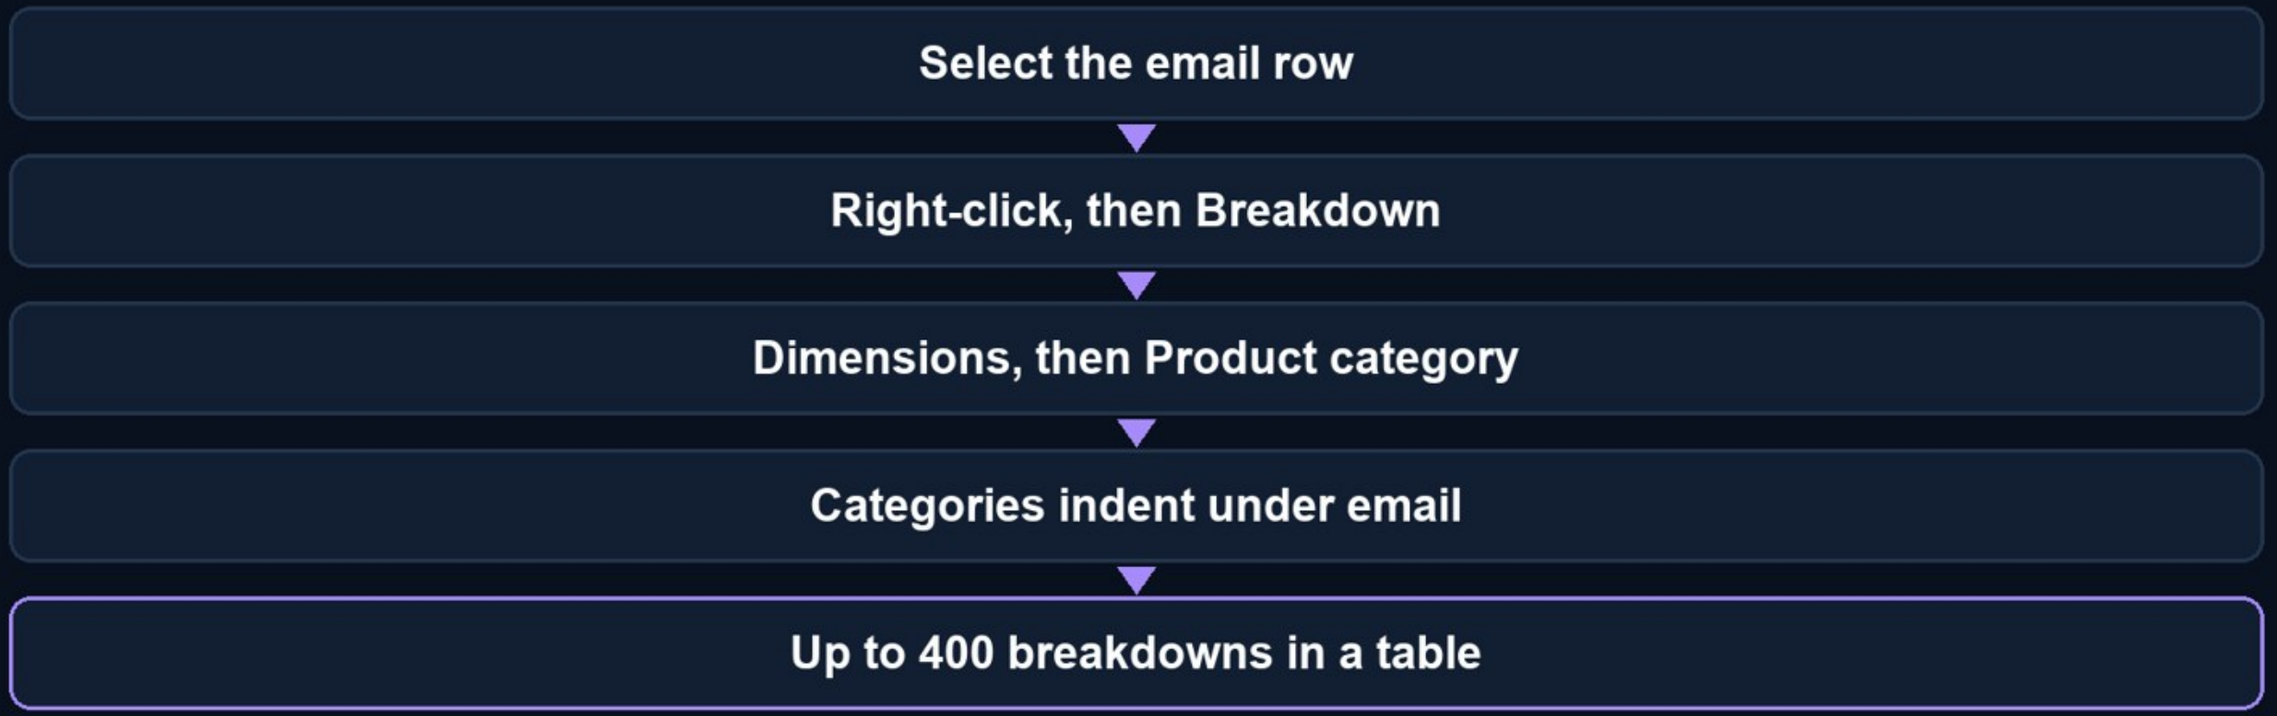

email and Email: two rows, one channel

Raw channel tag	Marketing channel (derived)
email: 150 orders	email: 180 orders
Email: 30 orders	Merged into email
No value: 520 orders	No value: 520 orders

KEY IDEA

Kavya had dragged the raw channel tag. The derived Marketing channel field, with its Lowercase rule, merged email and Email into one row of 180 orders.

Breakdowns: what do email buyers buy?

KEY IDEA

Right-click a row, choose Breakdown, then a dimension. The email row opens into product categories, indented underneath it.

Linked charts: one source, matching colours

- Select rows, then Insert, then Line
- The chart uses the closest freeform table
- Matching colours: the same data source
- Lock Selection: choose what the chart keeps
- Choose the question, then the chart

KEY IDEA

Select rows, then Insert and Line. The chart uses the nearest freeform table as its source, and matching colours show they are linked.

Question four: orders and revenue by band

Loyalty band	Orders	Revenue
Gold	300	$23,400
Silver	420	$23,100
Bronze	520	$19,760
Total	1,240	$66,260

Relaunch fortnight, Bloom sample storefront data (fictional)

KEY IDEA

Gold placed 300 orders, Silver 420 and Bronze 520. Gold had the fewest orders but the most revenue. Per-order value needs one shared definition.

One question, one window, one sentence

- One question per view
- A stated window on every panel
- One sentence of meaning above the table
- Test: a peer reads it without you
- Share with anyone needs no login: not for board numbers

KEY IDEA

Each view answers one question, states its window and carries one sentence of meaning, so someone can read it without you in the room.

Interview corner

- No value is a tracking gap, not a channel
- Bloom: 520 of 1,240 orders had no channel
- Size it and say it before ranking
- Merge duplicates like email and Email first
- One question, one window, one sentence

KEY IDEA

No value is a tracking gap, not a channel.

Recap, your question, and the Gold trap

- Write the question, then build the table
- Zeros? Check the date range, then the data view
- No value is a gap; merge duplicates first
- One question, one window, one sentence
- Next: segments and calculated metrics

KEY IDEA

Question first; check dates, No value and duplicates before ranking; one question, one window, one sentence. Next: segments and calculated metrics.
