AEP FROM ZERO • PART 3 • PROVE WHAT WORKED (CJA)

EPISODE 31

Publish CJA Audiences to AEP: Close the Loop

How to publish a Customer Journey Analytics (CJA) audience to Adobe Experience Platform (AEP) and close the loop, explained from zero. Bloom right-clicks the checkout leak in a fallout, uses Create audience from selection, and learns the CJA audience refresh frequency options and limits: a 90-day lookback, 20 million people and no calculated metrics, with the same consent rules and governance labels recorded at publish. The published audience feeds a Checkout Rescue journey in Adobe

Previously: a leak found, a report waiting

- Last time: the leak is checkout, mobile, non-Gold
- A confounder named, a test proposed
- Cart Rescue holdout read honestly as soft
- Old Bloom would have written a report
- Today: publish the leakers from CJA to AEP, then act

KEY IDEA

Last time the fallout found Bloom's leak: checkout, on mobile, among non-Gold customers. Today Bloom acts on those people instead of writing a report.

A report nobody acts on

- Of 300 people with a cart, only 132 bought
- Worst on mobile, among Silver and Bronze
- Old way: export a spreadsheet, email the agency, wait
- New way: publish the people, send them help
- Anjali: did any of it work?

KEY IDEA

A slide that says 'mobile checkout leaks' changes nothing. Anjali wants the people who leaked this week to hear something helpful this week.

How to publish a CJA audience to AEP

Right-click the step in the fallout

▼

Create audience from selection

▼

Name, refresh, check the filter

▼

View sample IDs, then Publish

▼

AEP: Customer, Audiences, Browse

▼

Origin: Customer Journey Analytics

KEY IDEA

Right-click what you found, choose Create audience from selection, check the people and publish. It appears in AEP within a minute or two.

Refresh, lookback and expiration

Setting	Options, and Bloom's choice
Refresh frequency	One time to Monthly; Bloom: Daily
Refresh lookback window	Up to 90 days; Bloom: 14 days
Expiration date	Default 1 year; Bloom: kept, with review

Create audience screen, Customer Journey Analytics

KEY IDEA

A CJA audience is either a one-time snapshot or a recurring rule. Refresh frequency, the lookback window and the expiration date decide which.

Three limits, and Kavya's shortcut

- Refresh lookback window: 90 days at most
- Size: 20 million people at most
- Calculated metrics: not included in the definition
- Scheduled refresh: a limited number, set by package
- Test the confounder in measurement, not in the audience

KEY IDEA

The lookback is 90 days at most, an audience holds at most 20 million people, and audiences cannot include calculated metrics.

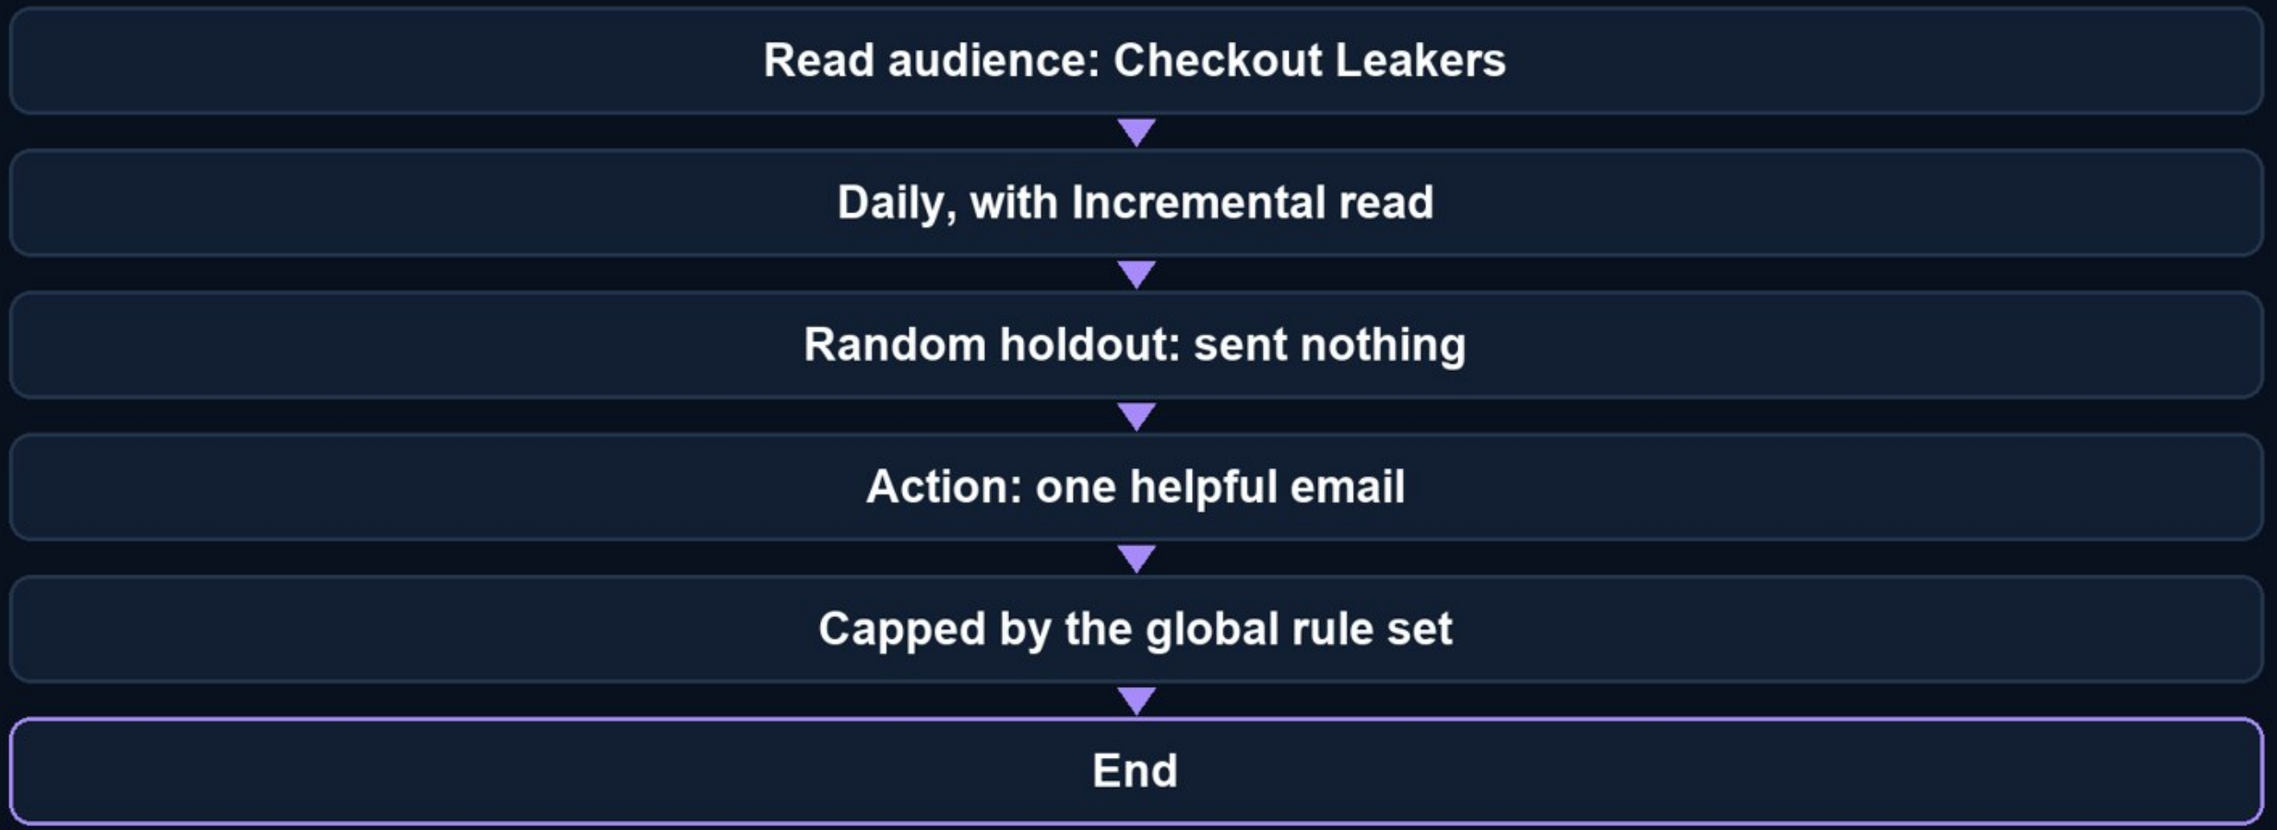

Born in analytics, same consent rules

- Same consent rules as any other audience
- Filter: email consent true, as in Lapsed 90
- Sent only through the Marketing configuration
- Governance labels recorded at publish
- Publishing rights: as few people as possible

KEY IDEA

An audience published from CJA obeys the same consent rules as any other. The governance labels on the fields it uses are recorded at publish.

Checkout Rescue: help, not a discount

KEY IDEA

Divya's Checkout Rescue journey enters through Read audience on a daily schedule, and sends a helpful message instead of a discount.

Write the expected effect first

- Expected: more leakers complete a purchase
- Metric: purchase within 7 days of entry
- Baseline: a random holdout, sent nothing
- Not the metric that flatters, such as opens
- Written and dated before go-live

KEY IDEA

Before Checkout Rescue went live, the team wrote down what should change, the metric and the baseline. Choosing the metric afterwards is self-deception.

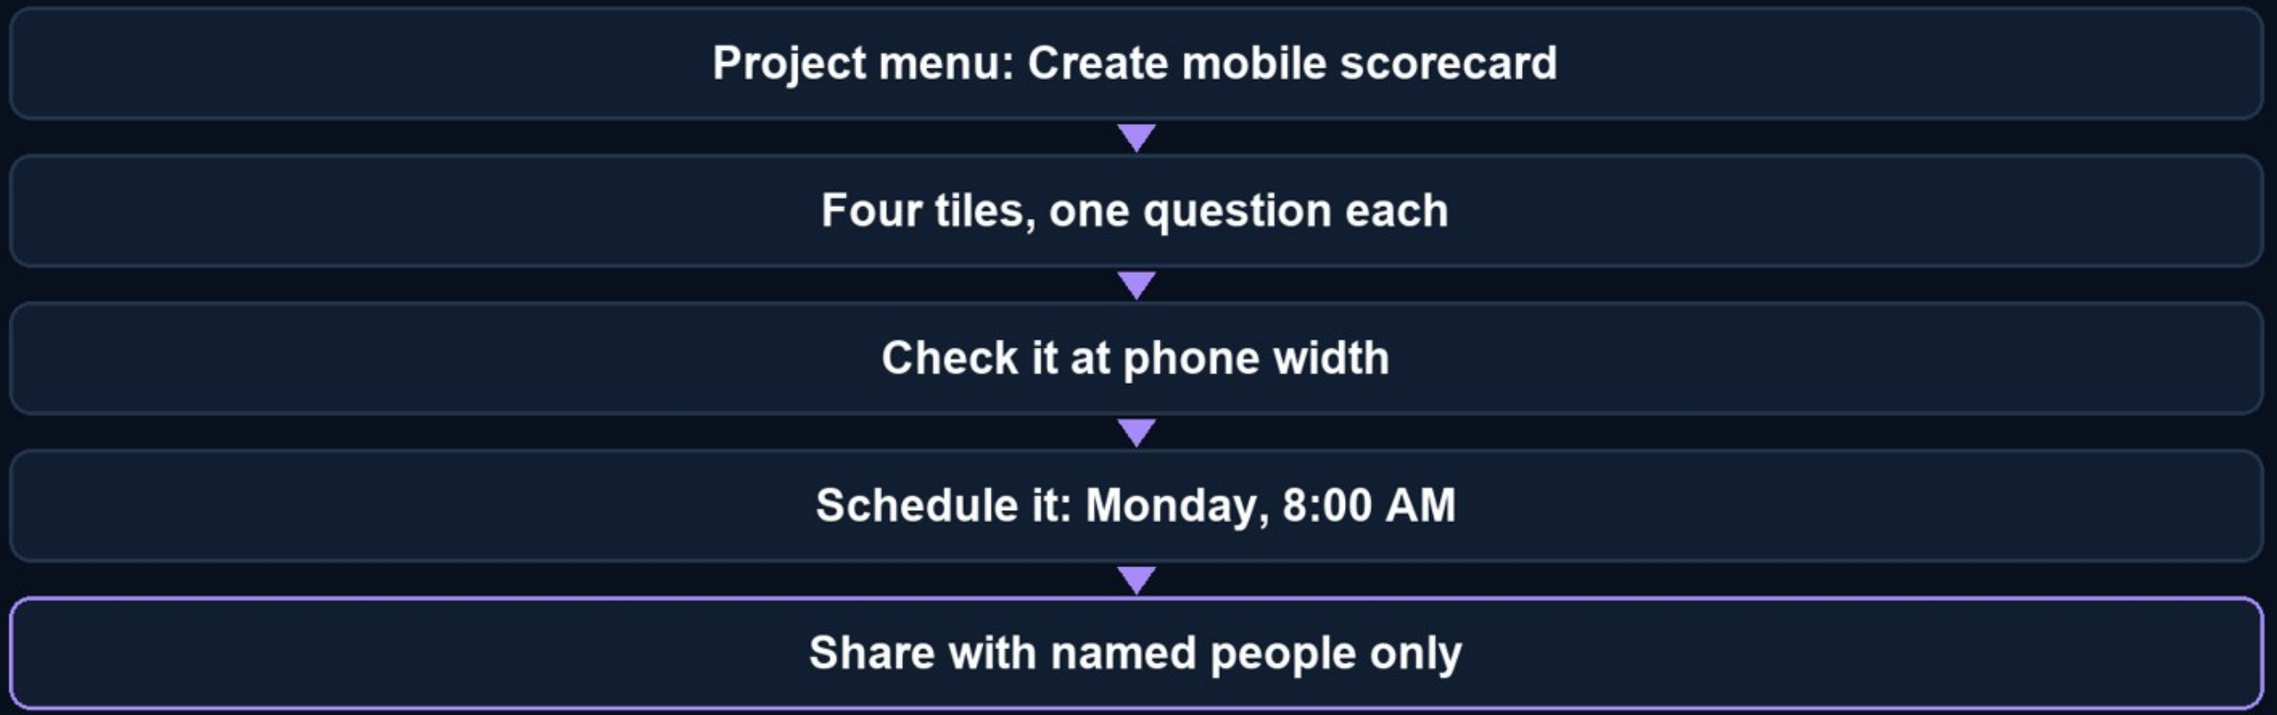

What does closing the loop mean?

Part of the flywheel	Where at Bloom	Built in episodes
Data	AEP datasets and profile	3 to 9
Audience	AEP Segment Builder	10 to 12
Journey	Journey Optimizer	16 to 24
Measurement	CJA: Bloom 360	25 to 30
Better audience	Published from CJA	31

KEY IDEA

Closing the loop means what measurement found changes the next campaign. The flywheel: data, audience, journey, measurement, better audience.

A mobile exec dashboard in CJA

KEY IDEA

Build it as a mobile scorecard from the Project menu: four tiles readable on a phone, scheduled to arrive, and shared only with named people.

Four tiles, each with its baseline

Tile	What Anjali reads
Revenue by channel	$66,260; 'No value' flagged as a gap
Journey performance	2,000 entries to 132 purchases
Recovery	11.8% vs 7.9% holdout: soft
Day-7 retention	New This Month, by first-order week

Bloom, relaunch fortnight, development sandbox sample data

KEY IDEA

Revenue with 'No value' flagged, the fallout, recovery against the holdout, and day-seven retention by cohort. Board numbers never travel by open link.

The offer report: who saw what

Decisioning reporting	What it tells Bloom
Total items, displays, clicks	What was served, and what was clicked
Fallback rate	How often Free Shipping had to step in
Engagement funnel	Displays to clicks, per strategy
Top decision items by Clickthrough rate	Which offers actually work

Campaign, Reports, View all time report

KEY IDEA

The decisioning report shows items, displays, clicks and the fallback rate: how often no strategy qualified and the fallback offer stepped in.

AJO reports, powered by CJA

- AJO all-time reports: powered by CJA
- Analyze in CJA: opens the report in Workspace
- Needs a CJA licence
- Data view must use the connection flagged Use in CJA
- Report audiences: 25 published per organisation

KEY IDEA

Journey Optimizer's all-time reports are powered by CJA. Analyze in CJA needs a CJA licence and a data view on the connection flagged Use in CJA.

Owner, cadence, review trigger

What	At Bloom
Owner: audience and scorecard	Rohan
Owner: Checkout Rescue	Divya
Owner: consent and sharing list	Tara
Cadence	Monday scorecard at the stand-up
Review trigger	No lift over holdout in four weeks

KEY IDEA

A loop that works only while its builder is in the room is not a loop. Name an owner for each step, a cadence and a review trigger.

Interview corner

- Closing the loop: the next campaign changes
- Leak found in a fallout, published to AEP
- Read audience into Checkout Rescue
- Expected effect and holdout before go-live
- Limits: 90 days, 20 million, no calculated metrics

KEY IDEA

Closing the loop means the next campaign changes. Otherwise it is just a report.

Recap, your question, and the next mystery

- Create audience from selection, then Publish
- Limits: 90 days, 20 million, no calculated metrics
- Same consent rules; labels recorded at publish
- Loop closed only when the next campaign changes
- Next: Adobe Analytics versus CJA

KEY IDEA

Publish from CJA within its limits; same consent; Read audience; expected effect first; a scorecard shared safely. Next: Adobe Analytics versus CJA.
