AEP FROM ZERO • PART 4 • MULTIPLY THE TEAM (AI)

EPISODE 33

Adobe AI Assistant & Data Insights Agent in CJA

Adobe AI Assistant and the Data Insights Agent in Customer Journey Analytics (CJA), explained from zero, with the verification habit that keeps AI honest. Bloom's team asks AI Assistant in Adobe Experience Platform ten questions about its own build (schema usage, audience overlap, journey status), scores every answer against the truth, and catches one confidently wrong answer about an identity namespace. You will untangle the 2026 names, AI Assistant, Data Insights Agent, Ask

Previously: the platform starts helping

- Last time: Rohan's Adobe Analytics memo
- Act Four: AI joins Bloom's team of five
- Ask the assistant about your own build
- AI Assistant, Data Insights Agent, Coworker
- Subject lines, captions and Tara's boundaries

KEY IDEA

Last time, Rohan's memo answered the Adobe Analytics question. Act Four opens: Bloom's stack gets an AI colleague, and Kavya learns to check it.

Monday: five people, the work of twenty

- Week six: five people doing the work of twenty
- The promise: answers in plain language
- The warning: it speeds up mistakes too
- The skill: interrogate the stack, then verify

KEY IDEA

Vikram brings the stack's newest colleague: an AI that answers in plain language, speeds up good and bad work alike, and is sometimes confidently wrong.

What is Adobe AI Assistant in AEP?

Good at	Risky at
Explaining an object	Exact facts about your own build
Drafting a query or a starting point	Sounding sure when it is wrong
Summarising what changed	Speeding up a beginner's mistakes
Tedious work you can check	Being the last check

KEY IDEA

An in-product assistant answers questions about the product and about your own objects. Treat it as a fast colleague with imperfect recall.

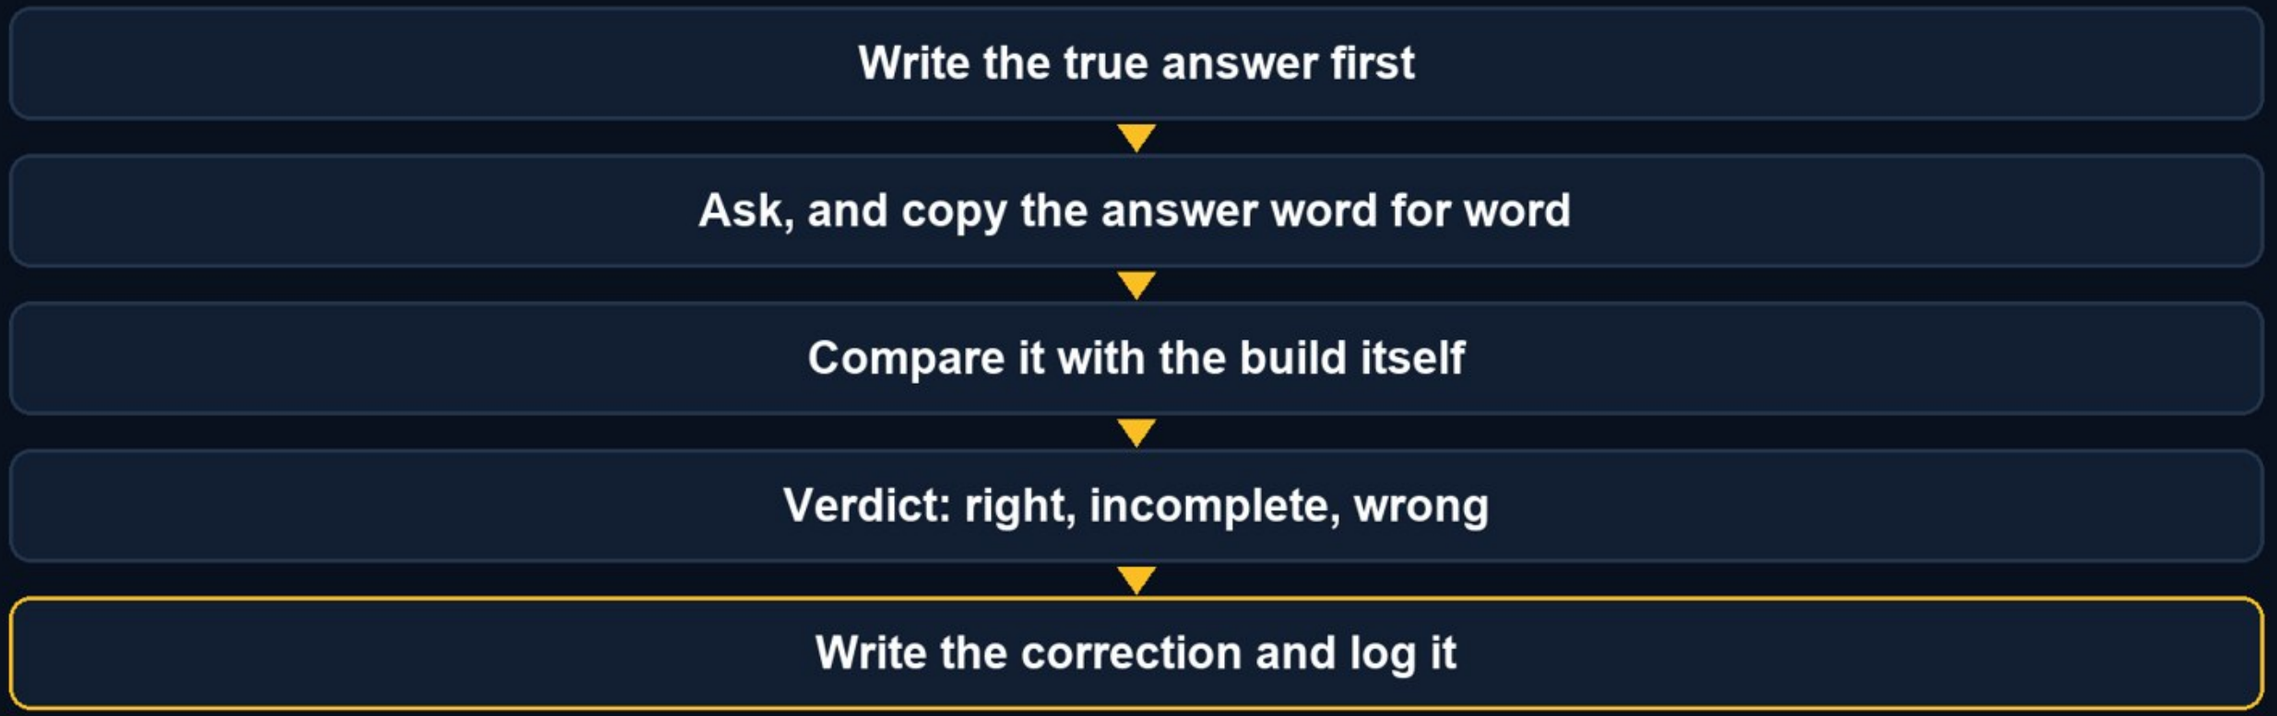

Ten questions before the first prompt

Kind	Example question	Where the truth lives
Schema usage (4)	Which schemas use BloomID?	Schemas, Browse
Audience overlap (3)	Lapsed 90 and Window Shoppers?	The two audience rules
Journey status (3)	What state is Welcome v1 in?	The journey list

KEY IDEA

Before asking anything, Kavya wrote ten questions about Bloom's own build, with the true answer beside each. The truth comes first.

How do you check an AI answer about your data?

KEY IDEA

Write the true answer first, ask, compare with the build, give a verdict of right, incomplete or wrong, then write the correction and log it.

Why one wrong answer mattered

Question	Assistant said	Verdict
Schemas using BloomID	Profile and order event	Wrong: order event only
Welcome v1 status	Live, and nothing more	Incomplete: read-only
Lapsed 90 overlap	How overlap works	Incomplete: no count

KEY IDEA

Believing it, Kavya would have promised BloomID lookups for customers who never ordered. Most answers were right, two were incomplete, one was wrong.

One agent flow: the overlap check

KEY IDEA

Vikram ran one specialised agent flow for the overlap. Kavya checked its answer against the two rules and recorded what it did on her behalf.

AI Assistant in CJA and the Data Insights Agent

Data Insights Agent builds	It does not build
Line and Multi-line	Flow
Freeform table	Fallout
Bar and Donut	Cohort table
Summary number	Attribution

Adobe documentation, as of 2026

KEY IDEA

In CJA, AI Assistant has two parts: Product Knowledge, and the Data Insights Agent, which answers data questions by building charts.

Is Coworker replacing Adobe AI Assistant?

Name	What Adobe says	What we see in October 2026
AI Assistant	Open it from the header icon	Header icon says Ask Coworker
Data Insights Agent	Access dates in early 2026	Both dates have passed
CX Enterprise Coworker	Generally available, June 2026	An evolution of AI Assistant

As of October 2026; check your own login

KEY IDEA

Data Insights Agent access dates have passed, the header now says Ask Coworker, and Adobe has not said what replaces what. Your own login is the fact.

Five subject lines, two kept

Generated line	Verdict and reason
Your skin has missed you, and so have…	Keep: warm and true
A little something to welcome you back	Keep: true, the Comeback offer waits
30% off, today only	Reject: an offer Bloom does not have
Clear skin in 7 days, guaranteed	Reject: a result nobody can promise
LAST CHANCE, in capitals	Reject: breaks tone, false urgency

KEY IDEA

In Journey Optimizer, Kavya generated five subject lines for the win-back email, kept the two that pass the brand sheet, and wrote why three fail.

An AI caption miscounted our chart

KEY IDEA

Intelligent captions describe a chart in words. On a Flow, one said 48 People, but its base was path views. Check every number and its unit.

Tara's three boundaries for AI work

- Never paste customer data into an unapproved tool
- Accepting AI terms is the organisation's decision
- AI may draft; a human approves and is accountable
- Know which tools are cleared for which data

KEY IDEA

Never paste customer data into an unapproved tool. Accepting AI terms is the organisation's decision. AI may draft; a human approves and is accountable.

The evidence sheet and the real leverage

Evidence sheet column	Kavya's BloomID row
Prompt	Which schemas use BloomID?
Output	Customer profile and order event
Verdict	Wrong
Correction	Order event only, as primary identity

KEY IDEA

Kavya's evidence sheet records prompt, output, verdict and correction. The leverage is not generating content; it is compressing the loop, with a check.

Interview corner

- AI may draft; a human approves and is accountable
- Write the truth first, then score each answer
- Show a caught error, not just the wins
- For Adobe's AI names: your login is the fact

KEY IDEA

AI may draft. A human approves, and the approver is accountable.

Recap, your question, and the next step

- A fast colleague with imperfect recall: verify
- Truth first; right, incomplete or wrong
- Your own login is the fact for AI names
- Generate many, keep few; check every caption's unit
- Next: RAG over Bloom's catalogue and FAQ

KEY IDEA

Write the truth first and score every answer; your login is the fact; keep few and check every unit. Next: an honest chatbot over Bloom's own content.
